Handbook for Mathematics Majors and Minors

This handbook is directed primarily to mathematics majors and minors; its purpose is to provide useful advice and information so that students can get the most out of their studies in mathematics. This handbook should also be a useful resource for potential majors and minors and for university personnel who advise students. The information and policies set forth here are intended to supplement material contained in the Bulletin of Duke University 2011–2012: Undergraduate Instruction. Much information about the Mathematics Department, including this handbook, can be found at the web site, http://www.math.duke.edu, especially under The Undergraduate Program.

The Duke University Handbook for Mathematics Majors and Minors is published annually by the Department of Mathematics, Duke University, Box 90320, Durham, NC 27708-0320, USA.

Copies of this handbook are available from the main office (117B Physics Building, (919) 660-6975). It is also available in .pdf format at the department web site (http://www.math.duke.edu).

Corrections to this handbook, proposed additions or revisions, and questions not addressed herein should be directed to the Director of Undergraduate Studies ((919) 660-2800, dus@math.duke.edu); electronic mail is preferred.

The information in this handbook applies to the academic year 2011-2012 and is accurate and current, to the best of our knowledge, as of August 2011. Inasmuch as changes may be necessary from time to time, the information contained herein is not binding on Duke University or the Duke University Department of Mathematics, and should not be construed as constituting a contract between Duke University and any individual. The University reserves the right to change programs of study, academic requirements, personnel assignments, the announced University calendar, and other matters described in this handbook without prior notice, in accordance with established procedures.

Acknowledgments

Chad Schoen
Director of Undergraduate Studies

Clark Bray

Courses and Course Selection

Course Numbering and Scheduling

The numbering scheme of upper level courses in the Department of Mathematics (which differs somewhat from that of other departments) is given below.

Numbers

<200 Undergraduate courses.

200–206 Primarily undergraduate courses. These courses are recommended for students planning graduate study in mathematics.

211–239 Graduate courses for students in mathematics and related disciplines. These courses are also appropriate for advanced undergraduates, especially those interested in the applications of mathematics.

>239 Primarily graduate courses for students in mathematics. However, sufficiently prepared undergraduates are encouraged to enroll. Standard first-year graduate courses in pure mathematics include 241, 245, and 251.

The department intends to offer all of the courses listed in this handbook regularly, assuming sufficient demand and staff. The courses that are offered every year are usually offered according to the schedule below.

Fall and spring: 104, 107, 108, 121, 131, 135, 139
Fall: 124, 149S, 181, 187, 200, 203, 215
Spring: 105, 126, 133, 136, 188, 201, 204, 206
Fall or spring: seminars from among 123S, 128S, 132S, 160S, 196S, 197S

The course list includes various mathematical courses from linear algebra to advanced topics in mathematics, physics, and computer science.
Requirements for the Mathematics Major

The Department of Mathematics offers both the Bachelor of Arts (A.B.) degree and the Bachelor of Science (B.S.) degree. Students who plan to attend graduate school in mathematics or the sciences should consider working toward the B.S. degree. The specific requirements for the A.B. and B.S. degrees are listed below.

Bachelor of Arts Degree (A.B.)

Prerequisites: Mathematics 31 or 31L or an equivalent course (Advanced Placement allowed); Mathematics 32 or 32L or 41 or an equivalent course (Advanced Placement allowed); Mathematics 103 and Mathematics 104 or equivalent courses. (Many upper-level mathematics courses assume programming experience at the level of Computer Science 4. Students without computer experience are encouraged to take Computer Science 6.)

Major Requirements: Seven courses in mathematics numbered above 107 including Mathematics 121 or 200 and Mathematics 139 or 203.

Bachelor of Science Degree (B.S.)

Prerequisites: Mathematics 31 or 31L or an equivalent course (Advanced Placement allowed); Mathematics 32 or 32L or 41 or an equivalent course (Advanced Placement allowed); Mathematics 103 and Mathematics 104 or equivalent courses. (Many upper-level mathematics courses assume programming experience at the level of Computer Science 4. Students without computer experience are encouraged to take Computer Science 6.)

Major Requirements: Eight courses in mathematics numbered above 107 including: Mathematics 121 or 200; Mathematics 139 or 203; and one of Mathematics 136, 181, 201, 204, 205, 206, 215, 216. There is also a Physics requirement. It may be met by receiving Advanced Placement credit for Physics 61 and 62; or by completing Physics 41L and 42L, Physics 53L and 54L, or Physics 61L and 62L; or by completing a program of Physics courses approved by the director of undergraduate studies.

Requirements for the Mathematics Minor

Prerequisites: Mathematics 103 or 105 or the equivalent. (Many upper-level courses assume programming experience at the level of Computer Science 4.)

Minor requirements: Five courses in mathematics numbered above 103, other than 105, to include at least one course (or its equivalent) selected from the following: Mathematics 121, 132S, 135, 139, 160S, 181, 187, or any 200-level course.

---

1A student who has already taken 107 and is interested in the major should consult with the Director of Undergraduate Studies.
2Math 105 is recommended for math majors; see Math 105 link at http://www.math.duke.edu
3A student may combine first and second semester courses from different pairs (e.g., Physics 41L and Physics 62L).
4For students who entered before the academic year 2009-10, Math 105 can count as one of the five courses for the minor.
Comments on Specific Courses

Math 107 – This course is not recommended for mathematics majors. Mathematics majors should instead take Math 104 (Linear Algebra and Applications), a prerequisite for the Mathematics major; and then Math 131 for a first course in differential equations, rather than Math 107 and Math 108.

Math 191, 192, 193, 194 – For more information on these courses, see the “Independent Study” section in this Handbook.

Course Descriptions

Given below are catalog descriptions of the mathematics courses numbered 104 and above that are most often taken by undergraduates. These descriptions are taken directly from the Undergraduate Bulletin. Please note that all courses listed below satisfy the M, QID and QS requirements for Curriculum 2000. In addition, Mathematics 139 (Advanced Calculus), Mathematics 203 (Basic Analysis I) and Mathematics 196S (Seminar in Mathematical Modeling) satisfy the W (writing) requirement. All seminars satisfy the R (research) requirement; these are: 49S, 123S, 128S, 132S, 149S, 151S, 160S, 196S, 197S, 199S.

104. Linear Algebra and Applications. QS Systems of linear equations and elementary row operations, Euclidean n-space and subspaces, linear transformations and matrix representations, Gram-Schmidt orthogonalization process, determinants, eigenvectors and eigenvalues; applications. Not open to students who have taken Mathematics 107. Prerequisite: Mathematics 32, 32L, or 41. Instructor: Staff. One course.

104X. Honors Intermediate Calculus and Linear Algebra. QS Similar to Mathematics 104, but more theoretical. Instructor: Staff. One course.

105. Vector Calculus. QS Partial differentiation, multiple integrals, and topics in differential and integral vector calculus, including Green’s theorem, Stokes’s theorem, and Gauss’s theorem for students with a background in linear algebra. Not open to students who have taken Mathematics 102 or 103. Prerequisite: Mathematics 104. Instructor: Staff. One course.

107. Linear Algebra and Differential Equations. QS Systems of linear equations, matrix operations, vector spaces, linear transformations, orthogonality, determinants, eigenvalues and eigenvectors, diagonalization, linear differential equations and systems with constant coefficients and applications, computer simulations. Intended primarily for engineering and science students. Prerequisite: Mathematics 102, 103, or 105. Not open to students who have had Mathematics 104. Instructor: Staff. One course.

121. Introduction to Abstract Algebra. QS Groups, rings, and fields. Students intending to take a year of abstract algebra should take Mathematics 200 and 201. Not open to students who have had Mathematics 200. Prerequisite: Mathematics 104. Instructor: Staff. One course.

123S. Geometry. QS, R Euclidean geometry, inverse and projective geometries, topology (Möbius strips, Klein bottle, projective space), and non-Euclidean geometries in two and three dimensions; contributions of Euclid, Gauss, Lobachevsky, Bolzai, Riemann, and Hilbert. Research project and paper required. Prerequisite: Mathematics 32, 32L, 41, or consent of instructor. Instructor: Staff. One course.
124. Combinatorics. QS Permutations and combinations, generating functions, recurrence relations; topics in enumeration theory, including the Principle of Inclusion-Exclusion and Polya Theory; topics in graph theory, including trees, circuits, and matrix representations; applications. Prerequisite: Mathematics 32, 32L, 41 or consent of instructor. Instructor: Staff. One course.

126. Introduction to Linear Programming and Game Theory. QS Fundamental properties of linear programs; linear inequalities and convex sets; primal simplex method, duality; integer programming; two-person and matrix games. Prerequisite: Mathematics 104 or equivalence. Instructor: Staff. One course.

128S. Number Theory. QS, R Divisibility properties of integers, prime numbers, congruences, quadratic reciprocity, number-theoretic functions, simple continued fractions, rational approximations; contributions of Fermat, Euler, and Gauss. Prerequisite: Mathematics 32, 32L, 41, or consent of instructor. Individual research paper required. Instructor: Staff. One course. C-L: Information Science and Information Studies

131. Elementary Differential Equations. QS First and second order differential equations with applications; linear systems of differential equations; Fourier series and applications to partial differential equations. Additional topics may include stability, nonlinear systems, bifurcations, or numerical methods. Not open to students who have had Mathematics 107 or Mathematics 108. Prerequisite: Mathematics 102, 103 or 105; corequisite: Mathematics 104. Instructor: Staff. One course.

132S. Nonlinear Ordinary Differential Equations. QS, R Theory and applications of systems of nonlinear ordinary differential equations. Topics may include qualitative behavior, numerical experiments, oscillations, bifurcations, deterministic chaos, fractal dimension of attracting sets, delay differential equations, and applications to the biological and physical sciences. Research project and paper required. Prerequisite: Mathematics 107 or 131 or consent of instructor. Instructor: Staff. One course.

133. Introduction to Partial Differential Equations. QS Heat, wave, and potential equations: scientific context, derivation, techniques of solution, and qualitative properties. Topics to include Fourier series and transforms, eigenvalue problems, maximum principles, Green’s functions, and characteristics. Intended primarily for mathematics majors and those with similar backgrounds. Prerequisite: Mathematics 108 or 131 or consent of instructor. Instructor: Staff. One course.

136. Statistics. QS An introduction to the concepts, theory, and application of statistical inference, including the structure of statistical problems, probability modeling, data analysis and statistical computing, and linear regression. Inference from the viewpoint of Bayesian statistics, with some discussion of sampling theory methods and comparative inference. Applications to problems in various fields. Prerequisite: Mathematics 104 or equivalent and Mathematics 135/Statistics 104. Instructor: Staff. One course. C-L: Statistics and Decision Sciences 114; also C-L: Information Science and Information Studies

139. Advanced Calculus I. QS, W Algebraic and topological structure of the real number system; rigorous development of one-variable calculus including continuous, differentiable, and Riemann integrable functions and the Fundamental Theorem of Calculus; uniform convergence of a sequence of functions; contributions of Newton, Leibniz, Cauchy, Riemann, and Weierstrass. Not open to students who have had Mathematics 203. Prerequisite: Mathematics 102,103 or 105. Instructor: Staff. One course.

149S. Problem Solving Seminar. QS Techniques for attacking and solving challenging
mathematics problems and writing mathematical proofs. Course may be repeated. Consent of instructor required. Instructor: Staff. Half course.

150. Topics in Mathematics from a Historical Perspective. QS Content of course determined by instructor. Prerequisite: Mathematics 139 or 203 or consent of instructor. Instructor: Staff. One course.

160S. Mathematical Numerical Analysis. QS, R Development of numerical techniques for accurate, efficient solution of problems in science, engineering, and mathematics through the use of computers. Linear systems, nonlinear equations, optimization, numerical integration, differential equations, simulation of dynamical systems, error analysis. Research project and paper required. Not open to students who have had Computer Science 150 or 250. Prerequisites: Mathematics 103 and 104 and basic knowledge of a programming language (at the level of Computer Science 6), or consent of instructor. Instructor: Staff. One course.

181. Complex Analysis. QS Complex numbers, analytic functions, complex integration, Taylor and Laurent series, theory of residues, argument and maximum principles, conformal mapping. Prerequisite: Mathematics 103 and 104 or consent of instructor. Instructor: Staff. One course.

187. Introduction to Mathematical Logic. QS Propositional calculus; predicate calculus. Gödel completeness theorem, applications of number theory, incompleteness theorem, additional topics in proof theory or computability; contributions of Aristotle, Boole, Frege, Hilbert, and Gödel. Prerequisite: Mathematics 103 and 104 or Philosophy 103. Instructor: Staff. One course.

188. Logic and Its Applications. QS Topics in proof theory, model theory, and recursion theory; applications to computer science, formal linguistics, mathematics, and philosophy. Usually taught jointly by faculty members from the departments of computer science, mathematics, and philosophy. Prerequisite: a course in logic or consent of instructor. Instructor: Staff. One course. C-L: Computer Science 148, Philosophy 150

191. Independent Study. Directed reading in a field of special interest under the supervision of a faculty member, resulting in a substantive paper or written report containing significant analysis and interpretation of a previously approved topic. Consent of instructor and director of undergraduate studies required. Instructor: Staff. One course.

192. Research Independent Study. R Individual research in a field of special interest under the supervision of a faculty member, the central goal of which is a substantive paper or written report containing significant analysis and interpretation of a previously approved topic. Consent of instructor and director of undergraduate studies required. Instructor: Staff. One course.

193. Independent Study. Same as Mathematics 191, but for seniors. Consent of instructor and director of undergraduate studies required. Instructor: Staff. One course.

194. Research Independent Study. R Same as Mathematics 192, but for seniors. Consent of instructor and director of undergraduate studies required. Instructor: Staff. One course.

196S. Seminar in Mathematical Modeling. QS, R, W Introduction to techniques used in the construction, analysis, and evaluation of mathematical models. Individual modeling projects in biology, chemistry, economics, engineering, medicine, or physics. Students must write at least one substantial paper on their project. Prerequisite: Mathematics 108 or 131 or consent of instructor. Instructor: Staff. One course.

197S. Seminar in Mathematics. QS, R Intended primarily for juniors and seniors majoring in mathematics. Required research project culminating in written report. Prerequisite: Mathematics 103 and 104. Instructor: Staff. One course.

199S. Honors Seminar. QS, R Topics vary. Consent of instructor and director of undergrad-
200. **Introduction to Algebraic Structures I.** QS Groups: symmetry, normal subgroups, quotient groups, group actions. Rings: homomorphisms, ideals, principal ideal domains, the Euclidean algorithm, unique factorization. Not open to students who have had Mathematics 121. Prerequisite: Mathematics 104 or equivalent. Instructor: Staff. One course.

201. **Introduction to Algebraic Structures II.** QS Fields and field extensions, modules over rings, further topics in groups, rings, fields, and their applications. Prerequisite: Mathematics 200, or 121 and consent of instructor. Instructor: Staff. One course.

203. **Basic Analysis I.** QS, W Topology of R^n, continuous functions, uniform convergence, compactness, infinite series, theory of differentiation, and integration. Not open to students who have had Mathematics 139. Prerequisite: Mathematics 104. Instructor: Staff. One course.

204. **Basic Analysis II.** QS Differential and integral calculus in R^n. Inverse and implicit function theorems. Further topics in multivariable analysis. Prerequisite: Mathematics 104; Mathematics 203, or 139 and consent of instructor. Instructor: Staff. One course.

205. **Topology.** QS Elementary topology, surfaces, covering spaces, Euler characteristic, fundamental group, homology theory, exact sequences. Prerequisite: Mathematics 104. Instructor: Staff. One course.

206. **Differential Geometry.** QS Geometry of curves and surfaces, the Serret-Frenet frame of a space curve, Gauss curvature, Cadazzi-Mainardi equations, the Gauss-Bonnet formula. Prerequisite: Mathematics 104. Instructor: Staff. One course.

215. **Mathematical Finance.** QS An introduction to the basic concepts of mathematical finance. Topics include modeling security price behavior, Brownian and geometric Brownian motion, mean variance analysis and the efficient frontier, expected utility maximization, Ito's formula and stochastic differential equations, the Black-Scholes equation and option pricing formula. Prerequisites: Mathematics 103, 104, 135 or equivalent, or consent of instructor. Instructor: Staff. One course. C-L: Economics 225

217. **Linear Models.** QS One course. C-L: see Statistics and Decision Sciences 244

218. **Introduction to Multivariate Statistics.** QS One course. C-L: see Statistics and Decision Sciences 245

219. **Introduction to Stochastic Calculus.** QS Introduction to the theory of stochastic differential equations oriented towards topics useful in applications. Brownian motion, stochastic integrals, and diffusions as solutions of stochastic differential equations. Functionals of diffusions and their connection with partial differential equations. Ito's formula, Girsanov's theorem, Feynman-Kac formula, Martingale representation theorem. Additional topics have included one dimensional boundary behavior, stochastic averaging, stochastic numerical methods. Prerequisites: Undergraduate background in real analysis (Mathematics 139) and probability (Mathematics 135). Instructor: Staff. One course.

221. **Numerical Analysis.** QS, R One course. C-L: see Computer Science 250; also C-L: Statistics and Decision Sciences 250

224. **Scientific Computing.** QS Structured scientific programming in C/C++ and FOR-

228. **Mathematical Fluid Dynamics.** QS Properties and solutions of the Euler and Navier-Stokes equations, including particle trajectories, vorticity, conserved quantities, shear, deformation and rotation in two and three dimensions, the Biot-Savart law, and singular integrals. Additional topics determined by the instructor. Prerequisite: Mathematics 133 or 211 or an equivalent course. Instructor: Staff. One course.

229. **Mathematical Modeling.** QS Formulation and analysis of mathematical models in science and engineering. Emphasis on case studies; may include individual or team research projects. Instructor: Staff. One course.

231. **Ordinary Differential Equations.** QS Existence and uniqueness theorems for nonlinear systems, well-posedness, two-point boundary value problems, phase plane diagrams, stability, dynamical systems, and strange attractors. Prerequisite: Mathematics 104, 107 or 131, and 203 or 139. Instructor: Staff. One course.

232. **Introduction to Partial Differential Equations.** QS Fundamental solutions of linear partial differential equations, hyperbolic equations, characteristics, Cauchy-Kowalevski theorem, propagation of singularities. Not open to students who have taken the former Mathematics 297. Prerequisite: Mathematics 204 or equivalent. Instructor: Staff. One course.

236. **General Relativity.** NS One course. C-L: see Physics 292

241. **Real Analysis.** QS Measures; Lebesgue integral; Lp spaces; Daniell integral, differentiation theory, product measures. Prerequisite: Mathematics 204 or equivalent. Instructor: Staff. One course.

242. **Functional Analysis.** QS Metric spaces, fixed point theorems, Baire category theorem,
Banach spaces, fundamental theorems of functional analysis, Fourier transform. Prerequisite: Mathematics 241 or equivalent. Instructor: Staff. One course.

245. Complex Analysis. QS Complex calculus, conformal mapping, Riemann mapping theorem, Riemann surfaces. Prerequisite: Mathematics 204 or equivalent. Instructor: Staff. One course.

248. Topics in Analysis. Harmonic analysis, dynamical systems, geometric measure theory, or calculus of variations. Prerequisite: Mathematics 241 and 245 or equivalents. Instructor: Staff. One course.

250. Computation in Algebra and Geometry. QS Application of computing to problems in areas of algebra and geometry, such as linear algebra, algebraic geometry, differential geometry, representation theory, and number theory, use of general purpose symbolic computation packages such as Maple or Mathematica; use of special purpose packages such as Macaulay, PARI-GP, and LiE; programming in C/C++. Previous experience with programming or the various mathematical topics not required. Corequisite: Mathematics 251 or consent of instructor. Instructor: Staff. One course.

251. Groups, Rings, and Fields. QS Groups including nilpotent and solvable groups, p-groups and Sylow theorems; rings and modules including classification of modules over a PID and applications to linear algebra; fields including extensions and Galois theory. Prerequisite: Mathematics 201 or equivalent. Instructor: Staff. One course.

252. An Introduction to Commutative Algebra and Algebraic Geometry. QS Affine algebraic varieties, Groebner bases, localization, chain conditions, dimension theory, singularities, completions. Prerequisite: Mathematics 251 or equivalent. Instructor: Staff. One course.

253. Representation Theory. QS Representation theory of finite groups, Lie algebras and Lie groups, roots, weights, Dynkin diagrams, classification of semisimple Lie algebras and their representations, exceptional groups, examples and applications to geometry and mathematical physics. Prerequisite: Mathematics 200 or equivalent. Instructor: Staff. One course. C-L: Physics 293

254. Topics in Algebra. QS Algebraic number theory, algebraic K-theory, homological algebra, or other topics. Prerequisite: Mathematics 251. Instructor: Staff. One course.

261. Algebraic Topology I. QS Fundamental group and covering spaces, singular and cellular homology, Eilenberg-Steenrod axioms of homology, Euler characteristic, classification of surfaces, singular and cellular cohomology. Prerequisite: Mathematics 200 and 205 or consent of instructor. Instructor: Staff. One course.

262. Algebraic Topology II. QS Universal coefficient theorems, K"unneth theorem, cup and cap products, Poincaré duality, plus topics selected from: higher homotopy groups, obstruction theory, Hurewicz and Whitehead theorems, and characteristic classes. Prerequisite: Mathematics 261 or consent of instructor. Instructor: Staff. One course.

263. Topics in Topology. QS Algebraic, geometric, or differential topology. Consent of instructor required. Instructor: Staff. One course.

267. Differential Geometry. QS Differentiable manifolds, fiber bundles, connections, curvature, characteristic classes, Riemannian geometry including submanifolds and variations of length integral, complex manifolds, homogeneous spaces. Prerequisite: Mathematics 204 or equivalent. Instructor: Staff. One course.

268. Topics in Differential Geometry. QS Lie groups and related topics, Hodge theory, index theory, minimal surfaces, Yang-Mills fields, exterior differential systems, harmonic maps, symplectic geometry. Prerequisite: Mathematics 267 or consent of instructor. Instructor: Staff. One course.

272. Riemann Surfaces. QS Compact Riemann Surfaces, maps to projective space, Riemann-Roch Theorem, Serre duality, Hurwitz formula, Hodge theory in dimension one, Jacobians, the Abel-Jacobi map, sheaves, Čech cohomology. Prerequisite: Mathematics 245 and Mathematics 261 or consent of instructor. Instructor: Staff. One course.
273. Algebraic Geometry. QS Projective varieties, morphisms, rational maps, sheaves, divisors, sheaf cohomology, resolution of singularities. Prerequisite: Mathematics 252 and 272 or consent of instructor. Instructor: Staff. One course.

274. Number Theory. QS Binary quadratic forms; orders, integral closure; Dedekind domains; fractional ideals; spectra of rings; Minkowski theory; fundamental finiteness theorems; valuations; ramification; zeta functions; density of primes in arithmetic progressions. Prerequisites: Mathematics 201 or 251 or consent of instructor. Instructor: Staff. One course.

277. Topics in Algebraic Geometry. QS Schemes, intersection theory, deformation theory, moduli, classification of varieties, variation of Hodge structure, Calabi-Yau manifolds, or arithmetic algebraic geometry. Prerequisite: Mathematics 273 or consent of instructor. Instructor: Staff. One course.

278. Topics in Complex Analysis. QS Geometric function theory, function algebras, several complex variables, uniformization, or analytic number theory. Prerequisite: Mathematics 245 or equivalent. Instructor: Staff. One course.

281. Hyperbolic Partial Differential Equations. QS Linear wave motion, dispersion, stationary phase, foundations of continuum mechanics, characteristics, linear hyperbolic systems, and nonlinear conservation laws. Prerequisite: Mathematics 232 or equivalent. Instructor: Staff. One course.

283. Topics in Partial Differential Equations. QS Hyperbolic conservation laws, pseudodifferential operators, variational inequalities, theoretical continuum mechanics. Prerequisite: Mathematics 281 or equivalent. Instructor: Staff. One course.

287. Probability. QS Theoretic probability. Triangular arrays, weak laws of large numbers, variants of the central limit theorem, rates of convergence of limit theorems, local limit theorems, stable laws, infinitely divisible distributions, general state space Markov chains, ergodic theorems, large deviations, martingales, Brownian motion and Donsker’s theorem. Prerequisites: Mathematics 241 or Statistics 205 or equivalent. Instructor: Staff. One course. C-L: Statistics and Decision Sciences 207

288. Topics in Probability Theory. QS Probability tools and theory, geared towards topics of current research interest. Possible additional prerequisites based on course content in a particular semester. Prerequisites: Mathematics 135 or equivalent, and consent of instructor. Instructor: Staff. One course. C-L: Statistics and Decision Sciences 297

295. Special Topics. QS Instructor: Staff. One course.

298. Special Readings. QS Instructor: Staff. One course.
Recommended Course Sequences

This section provides recommended course sequences appropriate to areas where a mathematics background is helpful, recommended, or required. For additional information on such areas, see the subsequent section, After Graduation: Educational and Professional Opportunities (page 23).

Applications of Mathematics

Many professions and many graduate and professional school programs regard a strong background in mathematics as highly desirable. Therefore, students having a primary interest in some other discipline may also want to pursue a major or minor in mathematics.

| Basic Courses | Mathematics 131, 135, 136, 160S (or 221) |
| Engineering and Natural Science | Mathematics 131, 132S, 133, 139, 181, 196S, 203, 204, 211, 216, 224 |
| Business and Economics | Mathematics 126, 132S, 215, 216 |
| Computer Science | Mathematics 124, 126, 187, 188, 200, 201 |

Actuarial Science

Actuaries can earn professional status by passing a series of examinations administered by the Society of Actuaries and Casualty Actuarial Society. The first two exams are:

- *ExamP*: Probability;

Old copies of these exams, together with answer keys and solutions, and information about submitting an application for the exams, can be found on the web at www.BeAnActuary.org.

The CAS Syllabus of Examinations and the Education Area of the SOA web site contain a description of the education and examination system for the Preliminary Actuarial Examinations, including the material to be covered for each examination, instructions, schedules, and applications. Students can find links to this information at www.BeAnActuary.org/exams/exam_info.cfm.

The optimal time to take the first exam is soon after completing a calculus-based probability course such as Mathematics 135. The following is a list of Duke courses that are useful in preparing for a career as an actuary.

| Probability and statistics | Mathematics 135, 136 |
| Mathematical finance | Mathematics 215 |
| Applied stochastic processes | Mathematics 216 |
| Intermediate Economics III | Economics 110 |
| Introduction to Econometrics | Economics 139 |
| Financial Markets and Management | Economics 157 |
| Data Analysis for Undergraduate Research | Statistics 121 |
| Probability and Statistical Methods | Statistics 214 |
| Linear Models | Statistics 244 |
As part of Preliminary Education in both the SOA and the CAS, there are three topics that require Validation by Educational Experience (VEE): Economics (macro and micro), Corporate Finance, and Applied Statistics (time series and regression). A directory of approved college courses that will satisfy VEE requirements is available at www.soa.org/files/pdf/edu-vee-dir-approved-courses.pdf.

If you are pursuing the SOA career path, you will start the Fundamentals of Actuarial Practice course after you finish the Preliminary Education requirements. FAP is an e-Learning course that includes both online and offline activities and exposes you to real-world situations.

For further information or additional advice about careers in the actuarial sciences, please contact Professor Dalene Stangl of the Department of Statistical Science [dalene@stat.duke.edu], Emily Reither [ere3s@allstate.com], or Andrew Tignanelli [andrew.tignanelli@prudential.com] (Emily and Andrew majored in mathematics at Duke).

The curriculum in Statistics and Operations Research at the University of North Carolina at Chapel Hill includes an Actuarial Science option through which students may take specialized courses in Long-Term Models (STOR 372, fall semester) and Short-Term Models (STOR 472, spring semester). Descriptions of these courses can be found at the curriculum’s web site, http://stat-or.unc.edu/teaching/ug_courses. Under a reciprocal agreement between the two universities, students at Duke may enroll concurrently in these courses offered by UNC–Chapel Hill (see page 83 of the Bulletin of Duke University, 2010–2011: Undergraduate Instruction). Note, however, that prior approval from the Director of Undergraduate Studies must be sought for such courses to count toward mathematics major or minor credit.

Duke students are welcome to participate in activities sponsored by the UNC undergraduate student actuarial club. See the website at http://www.unc.edu/caso for more information.

Charles W. Dunn (cwdunn@email.unc.edu), a Duke graduate and Fellow of the Society of Actuaries, teaches the UNC courses and will be happy to answer questions about them or about actuarial science in general.

Teaching Mathematics

The following courses are recommended for students planning careers as teachers of mathematics in secondary schools:

- Geometry (Mathematics 123S)
- Advanced Calculus (Mathematics 139 or 203)
- Abstract Algebra (Mathematics 121 or 200)
- Computer Science (Computer Science 4 or 6)
- Probability/Statistics (Mathematics 135/136)

The following courses would also be helpful:

- Combinatorics (Mathematics 124)
- Logic (Mathematics 187)
- Number Theory (Mathematics 128S)
- Mathematical Modeling (Mathematics 196S)
- Differential Equations (Mathematics 131)
- Two courses in Physics (See page 3.)
A student interested in becoming a secondary mathematics teacher should contact Jack Bookman (033 Physics, 660-2823, bookman@math.duke.edu). There are several paths that one might pursue to major in mathematics and also to be qualified to teach:

1. A math major who is interested in teaching at the high school level is encouraged to earn a Math Teaching License while working on the requirements for the mathematics major. The teaching license, which is earned by fulfilling the requirements prescribed by the State of North Carolina, is generally accepted in most of the 50 states by reciprocal agreement. With the goal that all classrooms be led by highly qualified professionals, schools are now required by federal mandate to ensure that teachers hold appropriate licensure in their respective content area.

Requirements for the Math Teaching License include a variety of courses in education and one in psychology, and other courses in mathematics. Students who complete the licensure program also earn a minor in Education.

The last semester of the senior year is devoted to the student teaching block, including two education courses and 10-12 weeks of full-time teaching and observation in a Durham Public School working with a licensed high school teacher and PiE faculty. The student teaching practicum counts as two course credits. Because of the time constraints this may impose on the planning of courses, students considering teaching high school math should confer with the faculty in the Program in Education (919-660-3075; www.duke.edu/web/education/) prior to the preparation of a long-range plan.

2. Alternatively, a student may complete the undergraduate degree in mathematics and proceed directly to graduate school to obtain a master of arts in teaching (MAT) or a master of arts in mathematics education. Either degree prepares one for a secondary school teaching position with an advanced pay scale, and some junior colleges employ teachers who hold these degrees. Duke has one of the most innovative MAT programs in the country. It is virtually unique with its emphasis on extensive classroom experience and on advanced mathematics courses rather than on education courses. The Mathematics Department has recently received a 3-year grant from the National Science Foundation that awards Fellowships to students who complete the MAT program in mathematics. The only requirement upon completion is to teach mathematics for two years in a high need school [the Durham public schools qualify]. For information about this program see the Director, Ginny Buckner (01 West Duke, 684-4353, Ginny.Buckner@duke.edu) or the representative for the Mathematics Department, Richard Hodel (209 Physics, 660-2846, hodel@math.duke.edu).

3. To teach in a private school, only an undergraduate degree with a major or minor in mathematics may be required. However, a mathematics major is highly recommended.

**Graduate Study in Mathematics**

A student planning to pursue graduate study in mathematics should develop a program of study that provides both variety of experience and a strong background in fundamental areas. The core courses for either pure or applied mathematics are Mathematics 181, 200–201, and 203–204; one of the sequences 200–201/203–204 should be taken no later than the junior year. Mathematics 131, 205, and 206 are recommended. Students interested in applied mathematics should consider Mathematics 132S, 133, 135, 136, 160S, 196S, 215, 216, 221 and 224. Advanced students are encouraged to take standard graduate–level courses (numbered 231 and above) in their senior (and occasionally in their junior) years: in particular, Mathematics 241, 245, and 251 are recommended.
Graduate programs usually expect that applicants will take the Graduate Record Examination Subject Test in mathematics, which emphasizes linear algebra, abstract algebra, and advanced calculus, but also includes questions about complex analysis, topology, combinatorics, probability, statistics, number theory, and algorithmic processes.

Statistics

Students who plan to pursue graduate work in statistics or operations research should follow a program similar to that given above for graduate study in mathematics and should include some of the following electives: Mathematics 135, 136, 215, 216, and 217, as well as Computer Science 6 and 100. A strong background in mathematics (especially analysis and linear algebra) and computing is the best basis for graduate work in statistics. As an alternative, a student might major in statistics. See http://www.stat.duke.edu.

Students who do not intend to pursue graduate work should elect Mathematics 135, 136, 215, 217, Computer Science 6 or 100 as well as some of the following courses: Mathematics 216, 218, 160 (or 221), Statistics 242, Computer Science 108. Statistics students at all levels are encouraged to take computer programming courses.

At present, job prospects are good at all degree levels for those who have a strong background in statistics and some computer programming experience. For further information, see Dalene Stangl, Director of Undergraduate Studies in the Department of Statistical Science (213 Old Chemistry, 668-5227, dalene@stat.duke.edu).
Advising

**Advising.** Usually, a student prepares a long-range plan and declares a first major in mathematics through the Premajor Advising Center; the student is then assigned an official faculty advisor by the Director of Undergraduate Studies. First majors are required to meet with their advisors each semester during the registration interval. The student and advisor should work together to ensure that the program of study is consistent with the student’s interests and professional goals.

A student who has declared a second major or a minor in mathematics will receive formal advising in the department of his or her first major; however second majors and minors and students considering a degree in mathematics may see the Director of Undergraduate Studies for advice or for referral to an appropriate member of the mathematics faculty. A second major or a minor in mathematics (or a change of major or minor) may be declared in the Office of the Registrar.

Math majors can schedule an appointment with the dean for mathematics students by calling 684-6217.

**Choosing courses.** Every mathematics major must take one course in abstract algebra (Mathematics 121 or Mathematics 200) and one course in advanced calculus (Mathematics 139 or Mathematics 203). To avoid conflicts during the final semesters of a major’s program, these courses should be taken as early as practicable. An essential part of these courses is proving mathematical theorems. Students with little exposure to proofs should probably take the 100-level version of these courses. Students who are comfortable with abstract ideas, and especially those students who are contemplating graduate work in mathematics, should consider taking the 200-level courses. The remaining courses may be chosen from both pure and applied areas of mathematics.

**Probability and statistics courses.** The standard sequence in probability and statistics is Mathematics 135–136. Mathematics 135 covers the basics of probability and Mathematics 136 covers statistics, building on the material in Mathematics 135. Those desiring a further course in probability should select either Mathematics 215 or 216 or both; a further course in statistics is Mathematics 217.

The Department of Statistical Science offers a number of courses in statistics at various levels for students of varied mathematics backgrounds. Usually, such courses cannot be counted for mathematics major or minor credit unless they are cross-listed in the Department of Mathematics. The Director of Undergraduate Studies may approve certain statistics courses numbered above 200 for credit, but usually only courses that have a prerequisite of Mathematics 136 or its equivalent will be considered.
Transfer Credit

Before enrolling at another school in a course for which transfer credit is wanted, a student must
(1) obtain departmental approval for the course, and
(2) obtain approval from the student’s academic dean.

To obtain departmental approval a student must contact
- the Director of Undergraduate Studies (DUS) for courses in mathematics to be taken abroad;
- the Associate Director of Undergraduate Studies (ADUS) for courses in mathematics numbered above 103 to be taken in the United States;
- the Supervisor of First-year Instruction (SFI) for courses numbered 103 and below.

The departmental approval of any summer courses should be requested **before the last week of classes** of the spring semester.

Although the decision to approve or disapprove a particular course will be made by the Director, the Associate Director of Undergraduate Studies or the Supervisor of First Year Instruction, a student can often make a preliminary determination by following the procedure below.

1. Verify that the number of transfer credits complies with limits set by the university (see Bulletin of Duke University 2011-2012 Undergraduate Instruction, in the section on General Education Course Requirements, under *The Major* and under *The Minor.*) At least half of the major/minor courses should be taken at Duke. In particular, Math 121 and 139 must be taken at Duke except for special circumstances for which students should petition to the DUS.

2. Obtain the regular catalog (or at least a copy of the pages containing descriptions of the mathematics courses) from the other school. All undergraduate mathematics courses should be included, so the course in question can be considered in the context of the other school’s mathematics program. Summer catalogs seldom contain enough information; and some regular catalogs are not sufficiently detailed; and in such a case, the petitioning student must obtain a syllabus or other official written description of the contents of the course.

3. Determine whether the school is on the semester system or the quarter system. If it is on the quarter system, two courses are needed to obtain one credit at Duke.

4. For summer courses, determine the number of contact hours, which is the product of the length of the class period in hours and the number of days that the class meets. Only courses with 35 or more contact hours are acceptable for transfer credit.

5. After determining that a course qualifies under all the criteria above, see the Director or Associate Director of Undergraduate Studies or the Supervisor of First Year Instruction, as appropriate for the course (see above).
6. If transfer credit is approved by the Department of Mathematics, seek the approval of the appropriate academic dean.

For more information on Transfer Credit, students should see the “T-Reqs” page at: http://trinity.duke.edu/academic-requirements?p=transfer-credit. Students can also ask their academic deans.

To receive transfer credit, a course grade of C– or higher is required; however, the university does not include a grade earned at another school as part of a student’s official transcript.

Students should note that, independent of receiving transfer credit, they will not be allowed to repeat at Duke a course taken elsewhere either for credit with a grade of C- or higher, or as an audit or pass/fail. For more information see http://trinity.duke.edu/academic-requirements?p=repeating-a-course.

A student considering a course offered during a summer term should bear in mind that such courses are frequently cancelled, owing to low enrollment.

General questions about university policy on transfer credit should be addressed to Deborah Shoffner (deborah.shoffner@duke.edu, 684-9029) or Harry Nelson (harry.nelson@duke.edu, 684-5655), to whom the required approval forms and transcripts are sent (103 Allen Building, facsimile: 684-4500).

## Credit for Courses Taken Abroad

Many Duke students study abroad as part of their academic program. Students make plans through the Global Education Office. See www.studyabroad.duke.edu and especially the Step-by-Step Guide. Study abroad requires careful planning for a mathematics major or minor, since learning in mathematics is cumulative and courses abroad may not correspond well to those at Duke. Serious planning should begin several semesters in advance. Obtain detailed information about the contents and prerequisites of courses at the foreign university. Then draw up a plan of study with the Director of Undergraduate Studies. More information is available at http://www.math.duke.edu/undergraduate/studyabroad.html. Note that at least half of the major/minor courses must be taken at Duke. In particular, Math 121 and 139 must be taken at Duke except in special circumstances with prior approval of the Director of Undergraduate Studies.

Courses taken abroad must be approved through the Global Education Office before you go. (See Step 5 of their Step-by-Step Guide and their web page Course Approval and Database.) If a course has not already been approved, the Global Education Office consults with the Director of Undergraduate Studies in mathematics. To obtain approval the student should furnish specific information about the course to the Global Education Office, such as the address of a web site with a catalog description of the course, including prerequisites, and if possible a syllabus for the course. Regardless of advanced planning, courses scheduled to be offered abroad may be canceled with little advance notice, or they may differ from a student’s expectations. In such a case, the student is responsible for contacting the Global Education Office or the Director of Undergraduate Studies for advice and approval of alternate courses.
Resources and Opportunities

Independent Study

An independent study course offers a student the opportunity for advanced study in an area of mathematics not usually covered in a regular course (Math 191 or 193) and to pursue a research project with a mentor (Math 192 or 194). A student may not obtain credit for independent study for a course that is offered regularly.

A student wishing to register for an independent study course must first make arrangements with a faculty member having expertise in the desired area. The supervision of an independent study is a significant commitment by a faculty member, and no faculty member is obligated to agree to supervise an independent study.

The student must complete the independent study permission form which is available at http://trinity.duke.edu/academic-requirements?p=independent-study. Particular attention must be given to planning the course of study and/or research in detail and to carefully describing this plan. Please follow the instructions at: http://www.math.duke.edu/undergraduate/indepstudy.html. The completed application should be submitted to the Director of Undergraduate Studies. The proposal will be considered in the context of the student’s interests, academic record, and professional goals. If the proposal is approved, the Director of Undergraduate Studies will issue a permission number for course registration.

Independent study in the math department is not generally eligible for writing code (W) designation.

Research Opportunities

An increasing number of math majors participate in summer research programs and internships. Of particular note are the REU (research experiences for undergraduates) programs sponsored by the National Science Foundation at dozens of colleges and universities throughout the country. See a list at http://www.nsf.gov/crssprgm/reu/reu_search.cfm.

Since 2000, the Duke Mathematics Department has provided stipends for up to eight math majors each summer for a six week mentored research project leading to Graduation with Distinction. See http://www.math.duke.edu/vigre/pruv/index.html for more information.

In addition, the Mathematics Department offers eight summer research stipends for students interested in the applications of mathematics to the life sciences and medicine. More information about this program can be found at www.math.duke.edu/mathbio and clicking on “undergraduate program” or by emailing the Director, Michael Reed.

Employment in the Department

The Department of Mathematics employs undergraduate students as office assistants, graders, help room/session tutors, and laboratory teaching assistants. Working as a laboratory teaching assistant can be valuable preparation for a student planning to become a mathematics teacher.

Applicants for the positions of grader, help room/session tutor, and laboratory teaching assistant should have taken the course involved and received a grade no lower than B. However, a student who received a good grade in a higher level course or who has advanced placement may be eligible to grade for a lower level course not taken.

Students wishing to apply for available positions may obtain an application in the Department of Mathematics Offices, Physics Building, Suite 117B.
## Library Facilities

The library’s mathematics collection was recently merged with the main library. Currently mathematics books are located on the fourth floor of the Bostock Library and must be checked out in Perkins. The library has a comprehensive collection of textbooks, monographs, journals, and reference works treating mathematics, statistics, physics, and astronomy. In addition, the library maintains materials on reserve for specific courses.

## Talks for Undergraduates

From time to time a mathematician is invited to give a talk that is specifically for undergraduates. Recent speakers and their topics are listed below.

<table>
<thead>
<tr>
<th>Speaker</th>

Duke University Mathematics Union

The Duke University Mathematics Union (DUMU) is a club for undergraduates with an interest in mathematics. Recent activities include sponsoring talks for undergraduates (see above) and hosting a mathematics contest for high school students; the contest attracts participants from throughout the southeast. Information about meetings and activities will be distributed by electronic mail and posted in the department. For current information about DUMU, see the Undergraduate Program page at the department’s web site, and click on the link for DUMU.

Graduation with Distinction in Mathematics

Mathematics majors who have strong academic records are eligible for graduation with distinction in mathematics. The requirements are:

1. An overall GPA of at least 3.3 and a mathematics GPA of at least 3.5, maintained until graduation;

2. A paper demonstrating significant independent work in mathematics, normally written under the supervision of a tenured or tenure-track faculty member of the Department of Mathematics. Usually the paper will be written as part of an independent study taken in the senior year (Mathematics 194);

3. An oral presentation of the paper, open to the public.

A student must apply for graduation with distinction in the spring of the junior year. The application should be prepared according to the specifications for an independent study course application (see the section on Independent Study), and the application should state the intention to pursue graduation with distinction in mathematics.

In the spring of the senior year, the Director of Undergraduate Studies will name a committee, normally including the candidate’s supervisor, to evaluate the paper and oral presentation. The evaluation committee will determine whether distinction will be awarded, and if so, the level of distinction: Graduation with Distinction in Mathematics, Graduation with High Distinction in Mathematics, or Graduation with Highest Distinction in Mathematics.

Competitions and Awards

Competitions

A half-credit Problem Solving Seminar (Mathematics 149S) is offered each fall to help students develop creative strategies for solving challenging mathematical problems; admission is by consent of the instructor. Each year students are encouraged to participate in the Virginia Tech Mathematics Contest, the William Lowell Putnam Mathematics Competition, and the Mathematical Contest in Modeling. Duke Putnam teams placed first in the nation in 1993, 1996 and 2000, second in 1990 and 1997 and third in 1999 and from 2001 to 2005. In the Mathematical Contest in Modeling, a team from Duke has been ranked Outstanding in all but two years from 1998 through 2008. Three teams from Duke in 2006 and four teams in 2007 were named Outstanding in the MCM and/or the related Interdisciplinary Contest in Modeling.
Karl Menger Award

The Karl Menger Award, first given in 1989, is a cash prize awarded annually by the Department of Mathematics for outstanding performance in mathematical competitions. The selection committee is appointed by the Director of Undergraduate Studies.

Karl Menger (1902–1985) was a distinguished mathematician who made major contributions to a number of areas of mathematics. The Karl Menger Award was established by a gift to Duke University from George and Eva Menger-Hammond, the daughter of Karl Menger.

The Julia Dale Prize in Mathematics

The Julia Dale Prize is a cash prize awarded annually by the Department of Mathematics to a mathematics major (or majors) on the basis of excellence in mathematics. A selection committee is appointed by the Director of Undergraduate Studies.

Julia Dale, an Assistant Professor of Mathematics at Duke University, died early in her career in 1936. Friends and relatives of Professor Dale established the Julia Dale Memorial Fund; the Julia Dale Prize is supported by the income from this fund, which was the first memorial fund established in honor of a woman member of the Duke faculty.

Computational Resources

All mathematics majors and minors are encouraged to develop computer skills and to make use of electronic mail (every Duke student is assigned a university electronic mail address upon matriculation). Some courses in mathematics may require students to use computers. In some cases, university-maintained computer clusters will suffice; in other cases, students may be required to use a workstation in our Unix Cluster.

General information. The department maintains a cluster of Unix Workstations in Room 274J, Physics Building. ACPUB logins are not accepted on these machines; a Mathematics Account is required (see below). There are nine Fedora Linux Workstations and a laser printer (designated lw3). This cluster is for undergraduate and graduate instruction and other appropriate purposes; it is open 24 hours a day except when in use by classes or for scheduled laboratory instruction. Students doing mathematics work have priority for use of the workstations. These Workstations, which utilize the Linux® operating system, provide access to electronic mail and the World Wide Web; moreover, original or previously written programs in FORTRAN, Pascal, C, and C++ may be run on these machines, and the mathematical software packages Maple® (xmaple), Mathematica® (mathematica) and Matlab® (matlab) are available to all users.

Opening an account. Mathematics first majors may obtain individual accounts to use the department’s network of Unix Workstations. Applications can be submitted online from the Computing Resources Web Page at http://www.math.duke.edu/computing. Accounts for mathematics first majors will expire upon graduation, withdrawal from the university, or change of first major.

Other undergraduate students will be granted access to joint class accounts or to individual temporary accounts when they are enrolled in mathematics classes that require access to the department’s network. Class accounts and temporary accounts will expire automatically at the end of each academic term.
Students are responsible for copying materials that they wish to preserve before the accounts expire. Files may be transferred to another networked computer via Secure Copy (scp) or Secure FTP (sftp) using software available from OIT at http://www.oit.duke.edu/comp-print/software/license/index.php, or through our web based file transfer system, called the Global Desktop Environment, at https://www.math.duke.edu/gde BEFORE the account expires. A CDROM image of your home directory can be created upon account termination. Please contact the Systems Staff for info regarding CD creation.

Electronic mail. Users can send and receive electronic mail through the department’s network; a typical electronic mail address has the form userid@math.duke.edu. The easiest way to read mail is through one of our Web Based Email programs. You can read mail through the Global Desktop Environment at http://www.math.duke.edu/gde by selecting the MailBox icon at the top of the page or through Twig at http://www.math.duke.edu/secure/twig/index.php3. To read or send mail, the user can choose from the several available mail applications, such as Thunderbird or the text based mail reader pine. The program Thunderbird is recommended for use within the department and is compatible with pine (useful over slow network links) so both programs can be used interchangeably.

Website: Department of Mathematics Home Page. A wide variety of current departmental information, including course information, departmental policies, and pointers to other mathematical web servers, can be found on the WWW home page. An internet browser program, such as mozilla, can be used to view the home page; the Uniform Resource Locator (URL) is http://www.math.duke.edu. Information about Computing Resources and Secure Remote Access to the Mathematics Department is located at http://www.math.duke.edu/computing. Current versions of this handbook and the local UNIX guide (“Using UNIX in the Duke Mathematics Department”) can be accessed from the department’s home page.

Inquiries and help. Routine questions (e.g., “How do I use this program? Why doesn’t this work? How do I set up the defaults?”) should be addressed by electronic mail to req@math.duke.edu. IMPORTANT: Please include as much specific information as possible, e.g., the workstation name, the exact command syntax used, any error messages encountered, and a log of the session.

Some Frequently Asked Questions about how to use the Linux systems in the department are answered at http://www.math.duke.edu/computing/faq.html. Please check here for answers before contacting support.

Remote Access. The Mathematics Department Firewall prevents telnet, ftp, imap, pop, and all other forms of unencrypted access. You will need to use SSH, available from http://www.openssh.com, or a Secure Web Browser (Netscape, Mozilla, Internet Explorer) to access resources in the department from remote locations. The Global Desktop Environment at http://www3.math.duke.edu/cgi-bin/gde is a good place to start if you need remote access to departmental resources. There are also several links and tips on the Computing Security Page available at http://www.math.duke.edu/computing/secure.html.

Security. The UNIX operating system is only secure if users take responsibility for its protection. Every user is responsible for the security of his or her own account.
Departmental policy prohibits the sharing of passwords or accounts and any other activity that undermines the security of the university’s computer systems. Users should be sure to log out when they finish using the machines in university clusters. Any suspicious activities related to the computers or accounts should be reported immediately to the system administrators. More complete information on security can be found in the local UNIX guide.

**User policy.** The computer system of the Department of Mathematics is provided to support mathematical instruction and research. To ensure that the system is fully available for these purposes, the Department of Mathematics has established a policy on responsible use of its computer system. This policy can be found on the web at [http://www.math.duke.edu/computing/policy.html](http://www.math.duke.edu/computing/policy.html). Violations of the user policy may lead to suspension of the user’s account or referral to the appropriate authority for disciplinary action. University policies and regulations, including the Duke Undergraduate Honor Code, and state and federal statutes, including the North Carolina Computer Crimes Act, cover many potential abuses of computers and computer networks.

**After Graduation:**

**Educational and Professional Opportunities**

**Career Information**

The web is the best and most up-to-date source of information on career opportunities in mathematics. The following organizations have useful web sites:

1. American Mathematical Society
2. Association for Women in Mathematics
3. Mathematical Association of America
4. American Statistical Association
5. Institute of Mathematical Statistics
6. Society of Actuaries
7. Society for Industrial and Applied Mathematics

An easy way to access these web sites is to use Google; search for *American Mathematical Society*, or *mathematical societies*, and so on.

The **Career Center** (located in Room 110, Page Building) is an excellent source of information on career opportunities in mathematics. Angie Smith ([angie.smith@duke.edu](mailto:angie.smith@duke.edu)) is the career specialist in mathematics and related fields; appointments can be made by calling 660-1050.

The Career Center administers electronic mailing lists for information about summer jobs, internships, on-campus employment, temporary positions, long-term employment, and on-campus recruiting by various employers. To subscribe to the mailing list for mathematics and related disciplines, go to the Career Center’s extensive website at [http://career.studentaffairs.duke.edu](http://career.studentaffairs.duke.edu).
Business, Law, and Health Professions

Business and law schools welcome and even actively recruit applications from students with a major in mathematics. Business schools require a strong quantitative background like that provided by an undergraduate degree in mathematics. Law schools value the analytical reasoning that is a basic part of a mathematical education. Medical schools regard mathematics as a strong major, and a number of mathematics majors at Duke have been successful in their applications to medical school. A mathematics background is also a strong credential for other health professions, e.g., dentistry, veterinary medicine, and optometry. Although the department receives some information about professional programs, more detailed information, including pamphlets, handouts, etc., is available from the offices of the deans listed below.

First-year students and sophomores interested in the health professions are encouraged to visit the website at http://prehealth.duke.edu/.

First- and second-year students can make an appointment with their prehealth advisor by calling 919-684-6217: If you live(d) in Alspaugh, Bassett, Brown, or Pegram, ask for an appointment with Dean Kostyu (donna.kostyu@duke.edu); if you live(d) in Aycock, Epworth, Giles, Jarvis, or Wilson, ask for an appointment with Dr. Chris Roy (chris.roy@duke.edu, 660-1518); if you are pre-vet or live(d) in Gilbert-Addoms or Southgate, ask for an appointment with Dean White (lwhite@duke.edu); if you live(d) in Bell Tower, Blackwell, or Randolph, ask for an appointment with Dean Perz-Edwards (akperz@duke.edu).

Teaching Mathematics

Duke graduates who have majored in mathematics and have teaching certification are in strong demand in the field of secondary education. Each year a few students graduate from Duke with teaching certification in secondary school mathematics, and they find that high schools—both public and private—are very interested in hiring them. A mathematics major can receive secondary mathematics certification either as an undergraduate, through the Program in Education, or through the Masters of Arts in Teaching (MAT) Program, a one-year program following graduation. The MAT Program allows qualified students to begin study during their final undergraduate semester and has substantial scholarship support available for qualified students. Duke’s MAT program has an emphasis on extensive classroom experience and on advanced mathematics courses rather than on education courses.

For information on the Program in Education, contact Susan Wynn (213 West Duke, 660-3075). For advice about this program from a member of the Mathematics Department, see Jack Bookman (033 Physics, 660-2823, bookman@math.duke.edu). For information on Duke’s MAT program, contact the Director, Ginny Buckner (01 West Duke, 684-4353, ginny.buckner@duke.edu). For advice about MAT program from a member of the Mathematics Department, see Richard Hodel (209 Physics Building, 660-2846,
Students considering teaching as a profession can get excellent experience working as graders, lab T.A.’s and/or help room assistants in the Department of Mathematics.

**Graduate Study in Mathematics**

A Doctor of Philosophy (Ph.D.) in pure or applied mathematics requires roughly five years of graduate work beyond the bachelor’s degree. The earlier years are spent in course work, while the later years are spent primarily doing original research culminating in a dissertation. Most graduate students in mathematics can get financial support for their study—both tuition and a stipend for living expenses. In return for this support the student usually performs some service for the department, most commonly teaching introductory undergraduate courses. Highly qualified students may receive fellowships or research assistantships that require little or no teaching.

About one-half of Ph.D.’s in mathematics find long-term employment at academic institutions, either at research universities such as Duke or at colleges devoted primarily to undergraduate teaching. At research universities, the effort of most faculty members is divided between teaching and conducting research in mathematics. The employment situation for Ph.D.’s in mathematics for academic positions is currently very tight. Most nonfaculty mathematicians are employed by government agencies, the private service sector, or the manufacturing industry.

Students considering graduate school in mathematics are urged to consult with the mathematics faculty and with the Director of Graduate Studies. The choice of graduate school and the area of study may make a significant difference in future job prospects. Information about graduate programs is available through the World Wide Web; to find out about Duke’s graduate program in mathematics, go to [http://www.math.duke.edu](http://www.math.duke.edu).

**Other Opportunities**

Graduate school in statistics, operations research, computer science, and mathematics-related scientific fields. Information about graduate programs in fields closely related to mathematics is available on the web. Students can also consult with corresponding graduate programs at Duke.

**United States Government.** A number of U.S. Government agencies hire graduates with strong preparation in mathematics; for example:

- Air Force and Navy
- Bureau of Census
- National Security Agency
- Peace Corps
- National Laboratories

All of these organizations have a web page with information about employment opportunities.

**Financial Services Industry, Management, etc.** There are many occupations that do not use mathematics directly but for which a major in mathematics is excellent preparation. Many employers are looking for individuals who have skills that are obtained by
mathematical training: clear, logical thinking; ability to attack a problem and find the best solution; prompt attention to daily work; ability to handle numerical data; analytical skills. Because many companies provide specific on-the-job training, a broad range of courses may be the best preparation for such occupations.

Recent Graduates. About 35% of graduates with majors or minors in mathematics proceed directly to graduate or professional school. Most other graduates are employed in the private or public sectors. The following is a list of typical positions taken by recent Duke alumni with undergraduate degrees in mathematics:

2007
- Actuarial analyst, UNUM
- Graduate associate, Standard Chartered Bank
- Consulting analyst, Mercer Management Consulting
- Analyst, Citigroup Global Transaction Services
- Actuarial analyst, Prudential Financial

2008
- Medical student, Yale School of Medicine
- Actuary, Cigna
- Investment banking analyst, Bank of America Leveraged Finance
- Analyst, Goldman Sachs, Currency Division
- Electrical engineer, Electro-Optics, Harris Corporation

2009
- Researcher, IRTA, National Institute of Health
- Investment banking analyst, Deutsche Bank
- Product developer, Hawkes Learning Systems
- Actuarial analyst, Aetna
- Medical student, Emory University

2010
- Medical student, Harvard University
- Energy Marketing Analyst, J.P. Morgan
- Senior Actuarial Analyst, CIGNA Corporation
- Neuroscience doctoral student, Harvard University
- Secondary Math Education, Peace Corps

2011
- Software Engineer, Apple
- Global Markets Analyst, Deutsche Bank
- Operations Management doctoral student, U. Penn, Wharton School
- Technology Consulting Analyst, Accenture
- Business Technology Analyst, Deloitte
Research Interests of the Faculty

Faculty members, their undergraduate/graduate schools, and research areas are listed below; more detailed information can be found via the department’s WWW server (http://www.math.duke.edu). An asterisk (*) indicates a joint appointment with the Physics Department.

Undergraduate Calendar

Fall 2011 — Spring 2012

August
23 Tuesday. New undergraduate student orientation
29 Monday. 8:30 A.M. Fall semester classes begin; Drop/Add continues

September
  9 Friday. Drop/Add ends
  25 Sunday. Founders’ Day

October
  7 Friday. Last day for reporting mid semester grades
  7 Friday. 7:00 P.M. Fall break begins
 12 Wednesday. 8:30 A.M. Classes resume

November
  2 Wednesday. Registration begins for spring semester, 2012
 16 Wednesday. Registration ends for spring semester, 2012
 17 Thursday. Drop/Add begins for Spring 2012
 22 Tuesday. 10:30 P.M. Thanksgiving recess begins
 28 Monday. 8:30 A.M. Classes resume

December
  9 Friday. Undergraduate classes end
10-12 Saturday-Monday. Undergraduate reading period
 13 Tuesday. 9:00 A.M. Final examinations begin
 18 Sunday. 10:00 P.M. Final examinations end

January
  11 Wednesday. 8:30 A.M. Spring semester classes begin; Drop/Add continues
 16 Monday. M.L. King holiday: no classes
 25 Wednesday. Drop/Add ends

February
  20 Monday. Registration begins for Summer 2012
 24 Friday. Last day for reporting mid semester grades

March
  2 Friday. 7:00 P.M. Spring recess begins
 12 Monday. 8:30 A.M. Classes resume

April
  4 Wednesday. Registration begins for Fall semester 2012
 13 Friday. Registration ends for Fall semester 2012
 14 Saturday. Drop/Add begins
 25 Wednesday. Undergraduate classes end
26-29 Thursday-Sunday. Undergraduate reading period
 30 Monday. Final examinations begin

May
  2 Wednesday. Undergraduate reading period (9:00 A.M.-2:00 P.M.)
  5 Saturday. 10:00 P.M. Final examinations end
 11 Friday. Commencement begins
 13 Sunday. Graduation exercises; conferring of degrees
